3/26/2015**

Name(s)	Species, Age, Sex	Description	Price
Banjo	Blue & Gold, 45 year old female	Huge female. She supposedly used to belong to Willie Nelson; she definitely responds to his music. She has produced babies for us, but hasn't had a nest in a few years as I was shutting down parts of my breeding program.	\$600
Ozzie	Blue & Gold, Male, 45 years old	Medium-sized male. I got Ozzie and his mate from a gigantic organic greenhouse where they had been breeding. He has an old wing injury and cannot fly. They had babies but didn't feed them at the greenhouse.	\$600
Fred	Green Winged Macaw, Male, Mid 40's	HUGE traditional male that is very protective of his mate. Proven for us until his mate kept biting his beak when he tried to drive her back into the nest when she wanted to see what was going on. Needs nest at the back of the cage. Fred is tolerant of people. If towed out of his cage, he stays put on a perch outside his cage and is very curious about his surroundings. Feather-perfect.	\$800
Babette	Green Winged Macaw, Female, 30 years old	Babette is a beautiful large green wing who has never had a mate. She was a pet and over-bonded with her person who died. She is feather-perfect and tame/sweet with most people. If she is alarmed by someone she will bite really hard, so she has to go to an experienced handler. Babette is a lovely, engaging bird who knows her own mind. She talks and plays and adores preening toys. She is outgoing and self-confident and has the softest feathers ever. She is curious about other green wings and goes through periods of being very nesty, shredding paper and trying to find a nice cozy nest site. She can also be a wonderful pet for people she likes.	\$1500
Lucy	Green Winged Macaw, Female, Mid 40's	Lucy and Fred had babies years ago when I first got them, and then they had disagreements and he became afraid of her "pointy end" and stopped copulating with her. She is a little picked on her belly but since being separated from Phoenix has been growing it back.	\$700

Name(s)	Species, Age, Sex	Description	Price
Cleo & Popeye	Red Fronted Macaws, Pair, around 15	Popeye has some lutino blood in him. Popeye and Cleopatra are bonded but have not bred for me.	\$1800
Roger & Alice	Illiger's macaws, pair, Alice is 18, Roger is 7.	Alice was proven before I got her, and they laid infertile eggs last year when I set her up with Roger, an inexperienced male. They are feather perfect.	\$1200
Mickey & Minnie	Illiger's macaws, pair, 15/-18 years	This pair was proven with their prior breeder, and I let them rest since getting them as they were going through a huge molt. They are now feather-perfect and ready to nest.	\$1200
Marie & Monte	Illiger's macaws, pair, 10 years old	They came to me as a bonded pair and produced infertile eggs last year. The female is picked on her tummy (from feathering her nest / brood patch).	\$1200
Jamie & Nicki	Mexican Red Headed Amazons, pair, about 20 years old	The female came to me picked around neck from another breeder who became ill and asked me to find homes for them. Previously proven, I have not set them up. The female came with a fatty tumor on her breast but that has disappeared and now they are in great physical condition and on great diet. Male loves people and could be a pet.	\$900
Arthur	Magna Double Yellow Headed Amazon, male, about 40 years old	Arthur is a magnificent Magna Double Yellow Head that has had wonderful babies with two different hens, and would adore having a new hen. He is a very good attentive father bird and an excellent mate to his partner. He is gorgeous and very shy with people. He has beautiful red-tipped feathers on the nape of his neck and long red shoulders. He is very healthy and other than a couple of bad toes due to toe bites he is in great condition	\$950
Sugar	Blue Fronted Amazon - Aestiva Aestiva, Female, about 15 years old	Previously proven, this beautiful girl came from another breeder who had not set up her birds in 5 years. Sugar is comfortable with people being around.	\$750
Mr Bird	Blue Fronted Amazon - Aestiva Aestiva, Male, unknown age	Mr Bird has raised some wonderful babies for me. His mate attacked him when she wanted a nest and I didn't put one up, and they got a divorce. He has a dietary cataract on one eye from a bad diet long before I got him.	\$600
Mrs Bird	Blue Fronted Amazon - Aestiva Aestiva, Female, about 20 years old	Mrs Bird has raised several clutches of very sweet babies for me and then turned on Mr Bird when they didn't have a nest and she wanted one. They got a divorce.	\$600

Name(s)	Species, Age, Sex	Description	Price
Felicia	Blue Fronted Amazon - Aestiva Aestiva, female, about 15 years old	Previously proven, this girl came from another breeder who had not set up her birds in 5 years. Felicia is comfortable with people being around and is very energetic.	\$750
Napoleon	Yellow Naped Amazon, male, about 15 years old	Came from another breeder who had not set up her birds in 5 years.	800
Lefty	Yellow Naped Amazon, male, 22 years old	Lefty is an ex-pet that likes one person and attacks everyone else. He needs his own appropriate mate to defend and protect.	800
Summer	Yellow Naped Amazon, female, about 15 years old	Came from another breeder who had not set up her birds in 5 years.	800
Wyatt & Jane	Double Yellow Headed Amazon, pair, about 20 years old	Came from another breeder who had not set up her birds in 5 years, this pair was previously proven for her. We have not set them up with a nest.	1500
Bodie & Lindsay	Blue Fronted Amazon - Aestiva Aestiva, pair, about 20 years old	Came from another breeder who had not set up her birds in 5 years, but they were proven for her before that. She is picked on her head.	1500
Charlie & Chiquita	Blue Fronted Amazons, pair about 30 years old	This pair has raised a lot of very nice babies for me, between 1 and 3 babies/clutch. They do a good job raising babies. He had a sting in the eye from an Africanized bee in Arizona before I got him, and other than a tiny dot in his eye there has been no permanent damage.	1500
Marshall & Marsha	Senegal , pair, unknown age	Came to me as individual birds, I paired them and this pair laid 3 clutches for me but none were fertile last year. These birds were previously paired with other birds and were proven for the other breeder that had them. Marshall is a very large senegal.	650
Stumpy senegal	Senegal, female, unknown age	Stumpy lost all the toes on one foot and a toe on the other foot before I got her. Last year she was a nanny bird to a number of babies - senegals, hahns mini macaws! We don't know if she has ever been a successful breeder.	300
Comet	Meyers, male, unknown age	Came from another breeder who had not set up her birds in 5 years. This boy has a very speckly head and was previously proven for the previous breeder.	450

Name(s)	Species, Age, Sex	Description	Price
Puff	Meyers, male, probably around 8 years old	Muffin came to me as individual bird from another breeder who had rescued him from Petsmart. He is curious about people but would need to be tamed to be a pet, as while he was hand raised he has reverted to being wild.	450
Niles	Brown Head, male, 9 years old	We raised this amazing boy to be a pet. He talks a lot and has a very funny sense of humor. Unfortunately something happened in his first pet home and he now loves one man at a time and bites all other humans. He needs to have a bird of his own to guard and love and raise a family with.	350
Coffee Cape	Brown Necked Cape, male, 14 years old	Was with a bad breeder where he picked himself. We handle him, steps up on towel, can handle outside of cage on your hand, talks, Coffee is a calm and easy bird. Won't grow any more feathers back on his chest. He clearly was raised to be a pet but would be fine as a breeder as he really enjoys other Capes.	1600
Cherish Maxi & Henry	Maxi Pionus, pair, about 10 years old	This pair was proven for me. Henry has severe beak deviation starting from his skull and needs to have his beak worked on every few weeks. Must hand feed babies from day 1 as he kills them and attacks female when she tries to protect them. Female is calm with people, he is shy (probably from all the beak jobs)	500
Mr & Mrs Shy Maxi	Maxi Pionus, pair, about 10 years old	Previously proven for another breeder, this pair came from an outdoor environment and my indoor environment is too stressful for them, they try to hide and get away from people and are not interested in the nest for me.	600
